RAIL-SYSTEMS
SLIDING FITTINGS

Take a (Thermal) Break from the Cold!

NEW THRESHOLD FOR
LIFT & SLIDE DOORS

MACO
RAIL-SYSTEMS

The threshold made from a new, high-quality GRP (glass fibre reinforced plastic) material composition sets new standards in living comfort and easy installation of Lift & Slide doors.

The heat transition coefficient is so minor that a thermal break is no longer necessary. Even with large differences in temperature, the new threshold material hardly expands.

It's High Time for Innovations!

High Performance in Hot or Cold Conditions!

An overview of your advantages:

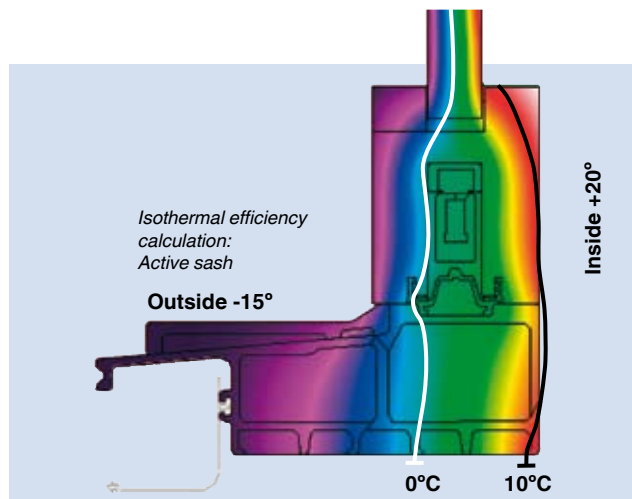

- Thermal breaks are no longer required
- Effective insulation against heat or cold
- Ideal solution against cold bridges and drafts
- Outstanding impermeability
- Very small material expansion
- The material is frost-proof and not sensitive to heat
- One-piece design
 - No costly tread-threshold cut outs are necessary
- Surface-finish can be painted in all colour tones
- Extremely robust surface
- Up to three sash levels possible
- The sliding sashes run smoothly and silently
- Optimal opening convenience
- Wheelchair accessible solution - only a 17mm high step

The new material is frost-proof and not sensitive to heat, and is equipped with an extremely robust surface.

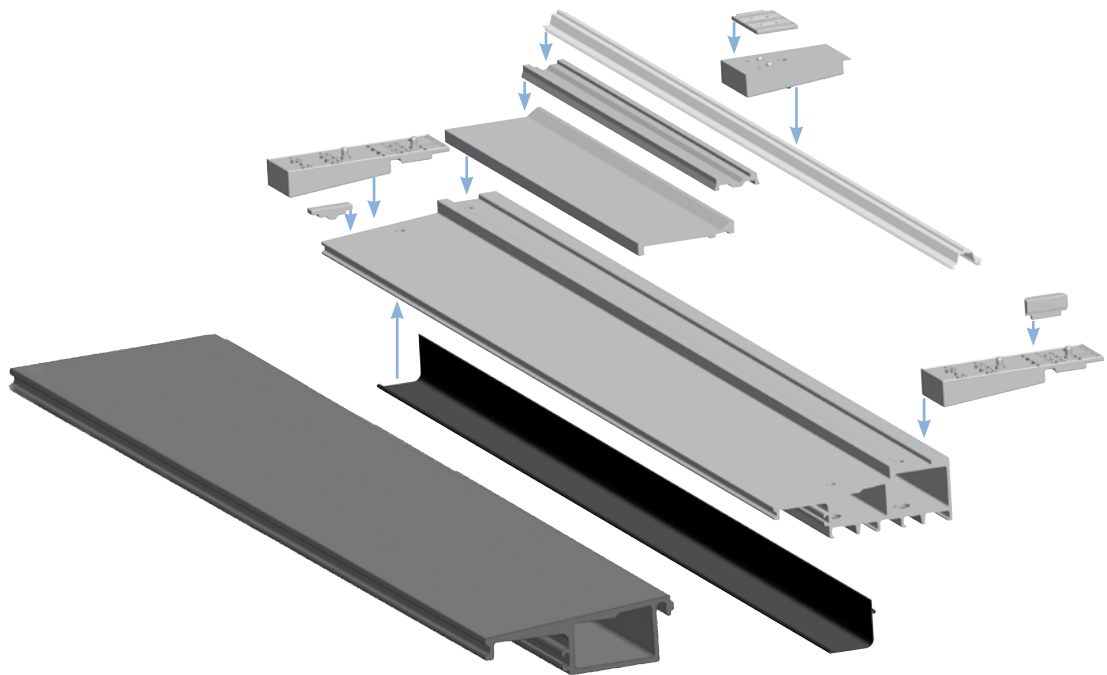

Wheelchair accessible solution - uncompromising security

The glass-fibre reinforced plastic (abbr. GRP) profiles insulate effectively against heat and cold. The very low material expansion is the basis for the dimensional stability; even at very high differences in temperature, and guarantees permanent optimal operational convenience.

Diverse Variety Without Compromise!

*Just a few individual components
make up the finished threshold.*

The MACO "Fibre Therm" threshold for Lift & Slide doors can be optionally applied for up to three sash levels.
